

Orlando Kenny

Software Engineer & Technical Project Manager

orlandoinnovates@gmail.com ♦ 954-778-1065

Skills

- **Programming Languages:** C++, Java, Python, SuperCollider, JavaScript (React), HTML, CSS
- **Research Topics:** Music Technology, Human-Computer Interaction, Computer Vision, Machine Learning, AI, Networking
- **Skills:** Technical Project Management, Team Leadership
- **Languages:** English and Spanish (Native/Bilingual)

Experience

Graduate Research Assistant, Atlanta, GA

July 2024-May 2026

Lab for Interaction and Immersion at the Georgia Institute of Technology

- Led a six-person team in developing **BIKES**, a mobile networked instrument composed of four cargo bikes with onboard computers, touch interfaces, and PA systems resulting in three published research papers and five major public presentations.
 - Built a networked music architecture using Python, SuperCollider, OSC, and Ansible to support interaction between bicycles and leverage different network topologies as a compositional parameter.
 - Implemented ultrawideband sensors to capture spatial relationships between riders and map real-time distance data to sound-generation parameters.
- Served as a teaching assistant for **MESH**, supporting 20 students in using Jack, SuperCollider, and Ansible to create a LAN-based networked music system concluding in three major public presentations at research conferences and art institutions.
 - Led a workshop at the 2025 SuperCollider Symposium and presented at the 2025 CIC Convergence Innovation Competition.
- Developed **ImmersEND**, a shared augmented reality controlled spatial soundscape using React, Three.js, and SuperCollider.

Project Manager & Software Developer (Volunteer), Atlanta, GA

January 2025-Present

M.E.A.T. (Music Experiments in Emerging Arts and Technology)

- Founded **M.E.A.T.**, a growing community arts organization of more than a dozen musicians, artists, and engineers conducting artistic research in music technology through public works.
- Led a multidisciplinary team through the planning, development, and delivery of more than a dozen creative technology projects experienced by thousands of people in partnership with different private and government organizations.
- Secured \$10,000 for project development through grant writing.
- Served as project lead on BUTCHER, an open-source, real-time audio analysis engine that analyzes live audio and sends control data to networked visuals, lighting, and installations resulting in two major public presentations experienced by over 600 people.
 - Built an audio analysis pipeline that used spectral-flux changes to track perceived energy level spikes in live audio.
 - Broadcasted flux readings to a distributed 25-laptop system over UDP messages and used OpenCV to generate visuals.

Software Developer, Atlanta, GA

August 2021-May 2024

What a Damn Site. (React)

- Developed experimental web applications using React, a lightweight and data-driven modern website development framework.
- Developed dozens of websites for artists, photographers, lawyers, startups, and studios helping increase site traffic, largely improving SEO, and increasing customer retention.
 - Developed an **augmented reality experience** for an NYC pop-up shop that was experienced by hundreds of real-time users.

Junior Software Developer, Atlanta, GA

June 2021-June 2022

InductiveHealth Informatics (Java, Data Analytics)

- Served as the lead technical resource on the state of Rhode Island, aiding with the management of eCR (electronic case reports) on state owned databases, owning the maintenance of thousands of health records.
- Developed an algorithm that parsed through a comma separated (CSV) file and generated electronic case reports in response to updated CDC reporting guidelines, speeding up the pipeline of reporting cases from state jurisdictions to relevant federal agencies.

Information Technology Intern, St. Petersburg, FL

May 2020-August 2020

Raymond James Financial, Inc. (Data Analytics)

- Worked with the Technology Service Center Leadership and the Reporting Team to assess various center-wide Key Performance Indicators and developed a dashboard that showed real-time and historical information using Tableau.
 - Created a drillable month over month view and a summary view to help managers and TSC leadership quickly visualize data, understand spikes in metrics, and make effective decisions with synthesized data gathered from thousands of calls.

Computer Programming Intern, Tallahassee, FL

April 2019-April 2021

FSU Innovation Hub (React)

- Led a team of eight to develop **Covid-Central**, a centralized hub filled with reliable information, resources, and statistics regarding the outbreak of the COVID-19 virus, resulting in thousands of site visits over a six month period.
- Learned about the ideation process, innovation, and design thinking over a three year period.

Publications, Talks, & Honors

Kenny, O., Gomez, L., Sathe, S., von Coler, H. *BIKES: A Moving Network Instrument for Music and Sound Art*. IEEE Internet of Sounds (IS2), 2025.

Artist in Residence, *MARTA Artbound*. Metropolitan Atlanta Rapid Transit Authority, 2026-2027.

Featured in: Stewart, M. *Creative Inquiry: From Ideation to Implementation*. State University of New York Press, 2021.

Invited Panelist, *Innovating at the Intersection of Art and Technology*. Atlanta Art Fair, 2025.

Workshop Lead, *SPRAWL 3.0 — Network Music Meta-Instrument*. SuperCollider Symposium, 2025.

Installation Presenter, *MĚSH*. Future Tech Forum + CIC Asia, Kuala Lumpur, 2025.

Florida Academic Scholars Award Recipient, *Florida Bright Futures Full Tuition Scholarship*, 2018-2021.

Education

Master of Science in Music Technology

Georgia Institute of Technology

Bachelor of Science in Computer Science

Florida State University
